

Human Papilloma Virus (HPV)

The physicians at Stark Women's Center are dedicated to providing the best possible preventative care to their patients. They have generally accepted and adopted the HPV screening test as part of the standard of care for the yearly visit. HPV is the human papillomavirus which can cause cervical cancer and cancer of the vaginal wall. The HPV test is highly recommended by physicians even if you have had a hysterectomy. The screening is taken directly from the pap sample and therefore no other procedure is necessary.

This notice is to inform you that the screening is automatically performed by your in-network lab based on pap results and medical necessity. There is a possibility of non-coverage for this service. Please be advised that if this service is not covered by your insurance company you will be responsible for the balance incurred. If you receive a bill from the lab for the HPV test and you believe this test is covered under your insurance plan, you can call for assistance from **QIAGEN REIMBURSEMENT HOTLINE** at 1-866-895-1HPV. The benefit specialists will work with your health plan to determine why your claim was denied.

I, _____ acknowledge that I have read and understand the information provided to me by Stark County Women's Center that my HPV testing may not be a covered benefit under my insurance policy and I will be responsible for any non-covered balance incurred.
